

Leading the Cybersecurity Network

Investing in new technologies requires time, subject matter expertise and the experience to understand the interconnected dependencies of your business-critical applications.

Much more than a sales agent or “consultant,” blueviolet networks is a full-service provider who supports clients with a staff of consultants, project managers, trainers, and highly skilled, expert engineers.

Design

Constant engagement with leading solutions providers as well as emerging technologies, allow us to navigate through the noise of marketing, helping our clients stay focused on what matters most - business drivers. Our vendor agnostic approach means there is no conflict of interest. We are your advocates from proof of concept to finding you the best terms and conditions offered by providers. There is no substitute for our experience.

Install

Communication throughout the entire process helps keep deployments on time and on budget. From the initial discovery and documentation to the coordination with the many inter-dependent providers required, blueviolet networks will manage the often-overlooked partnerships, internally and externally, that are necessary for a successful project completion.

Maintain

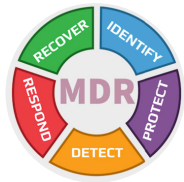

Regular evaluation of our customer service processes help us implement improvements based on feedback and evolving customer needs. We stay updated on industry best practices and emerging technologies to enhance our customer service capabilities. We remain committed to always providing timely and clear communication with our valued customers.

Your Cybersecurity Trusted Partner

Cybersecurity Solutions

blueviolet networks is dedicated to protecting your mission critical assets to safeguard your business against evolving cybersecurity threats. Our team of trusted advisors can help navigate through the complexities in developing security strategies and deployment of solutions for your organization's unique challenges.

MDR: Managed Detection and Response

Stay ahead of cybersecurity threats. Our proactive approach offers continuous monitoring, threat detection and rapid response capabilities to safeguard business against evolving cyber threats.

Incident Response

Timely recovery from security incidents is critical. Our team can help contain, remediate and mitigate security threats after an incident to help minimize the business impact.

Advisory/vCISO

In the face of a +600% surge in cyberattacks and growing compliance complexities, mitigating enterprise risk is daunting. Our Virtual Chief Information Security Officer (vCISO) Service provides strategic leadership and oversight, aligning security with business goals for proactive defense and sustained success.

Penetration Testing

Organizations with complex IT systems need top-tier Penetration Testing services for comprehensive vulnerability identification and scalability. Our unique service blends onshore, nearshore, and offshore testers to deliver high-quality testing at competitive rates, maximizing value without compromising quality.

Security Assessment

Security Assessments are the essential first step in cybersecurity. They comprehensively evaluate your entire environment, whether it's on-premises, in the cloud, or within SaaS platforms, uncovering vulnerabilities before they're exploited.

Multi-Factor Authentication:

As regulations evolve, organizations turn to Multi-Factor Authentication (MFA) platforms. Premium MFA options offer seamless authentication and resistance to phishing, enhancing security against cyber threats like ransomware and data breaches.

Call us today at (888) 634 - 0434

At blueviolet networks, we work hard to become your trusted partner in technology. We understand that you need more than a reliable product, but rather a reliable solution that can support you long after installation and can adapt to your business' growing demands.
